CHARMELLE JOHN C. CAHUCOM

Aspiring Software Developer — Backend Focused

Km.4 San Antonio Bajada Davao City | 09932788121 | charmellejohn@gmail.com | https://github.com/Chams15

PROFESSIONAL SUMMARY

Third-year Bachelor of Science in Computer Science student at the University of Mindanao with hands-on experience in full-stack web development, database design, and simulation modeling. Primarily a backend-oriented developer with working knowledge of front-end tools such as Figma and Tailwind CSS. Proficient in Java, PHP, JavaScript, TypeScript, and Python, with frameworks including Laravel, React, Medusa, and AdonisJS. Also has practical exposure to AI model training and the design of small agentic workflows. Seeking an internship opportunity to apply and further develop technical and professional skills in a real-world software development environment.

EDUCATION

Bachelor of Science in Computer Science *Expected Graduation: June 2027*
University of Mindanao — 3rd Year Undergraduate

TECHNICAL SKILLS

- **Programming Languages:** Java, PHP, JavaScript, TypeScript, Python; currently expanding skills in Rust and C++ through self-directed study
- **Frameworks & Libraries:** Laravel, React, with additional minor experience in MedusaJS and AdonisJS
- **Front-End Tools:** Figma (UI/UX design), Tailwind CSS
- **Database & Backend:** Database design (SQL), full-stack web application development, backend system architecture
- **Other:** AI model training, development of minor agentic workflows, simulation modeling with SimPy

PROJECT EXPERIENCE

G&D Boarding House Management System — Full-Stack Laravel Developer *November 2025 – March 2026*

- Developed a web application for managing rental house and boarding house operations, including tenant and room management workflows.
- Designed the underlying database structure to support reliable storage and retrieval of tenant, billing, and property data.
- Built both front-end and back-end components (**Laravel Backend: ReactJS Frontend**), handling the application end-to-end as a full-stack developer.

Computer Cafe Feasibility Simulation Study — Simulation Developer *January 2026 – March 2026*

- Built a simulation model using SimPy to support a business feasibility study for a proposed computer cafe.
- Incorporated research data into the simulation to model customer flow and operational scenarios.
- Translated feasibility findings into a working simulation to help evaluate the viability of the business concept.

AI Training & Agentic Workflow Exploration *November 2025 – March 2026*

- Developed a command-line Retrieval-Augmented Generation (RAG) chatbot capable of answering questions about J.R.R. Tolkien's "The Hobbit," built using Ollama, LangChain, and ChromaDB.
- Implemented the retrieval pipeline by chunking and embedding source text, storing vector representations in ChromaDB, and retrieving relevant context to ground the language model's responses.
- Integrated Ollama as the local language model runtime and LangChain to orchestrate the retrieval-augmentation workflow, combining retrieved context with generated responses for more accurate, source-grounded answers.
- Gained practical experience in AI model training and evaluation, including tuning retrieval accuracy and response quality.

- Designed and implemented minor agentic workflows to automate small, well-defined tasks, applying similar orchestration concepts used in the RAG chatbot project.

Procurement System Development Intern — Rypaci IT Solutions July 2026 – August 2026

- Contributed to the development and enhancement of a procurement management subsystem built on top of a legacy Laravel 5 application.
- Configured and utilized Docker containers to ensure consistent local development environments and streamline the integration process.
- Managed and optimized CI/CD workflows utilizing GitHub Actions, employing the act CLI for robust local pipeline testing before deployment.

CERTIFICATION

Information Technology Specialist: Java - Issued by Certiport

Candidates for this exam will demonstrate that they can recognize, write, and debug Java code that will logically solve a problem.

SELF-DIRECTED LEARNING

- Currently learning Rust and C++ independently to broaden systems-level programming capabilities.
